

## Exercise 3.2: Data Quality Inspection

- Categories has no errors.
- CustomerCustomerDemo table has no errors.
- CustomerDemographics table has no errors.
- In customer table:

CustomerID: Hungo has a null postal code. One way to fix is to manually go on google and search for the postal code of his city and address.

- In employees table:  
Employee id 2 has null value on reports to column. The fix this we could contact our customer.
- Employee territories table has no error.
- Order details table has no errors.
- Order table:

For customerID: Hungo his shipping postal code is null for all orders. To fix this we need to google his address and city and then find the postal code.

Some orders have a null shipping date. To fix this we need to go and verify the data from the source that it comes from.

- Product table has no error.
- Region table has no errors.
- Shippers table has no errors.
- Suppliers table has no errors.
- Territories table has no errors.
